

CUTMAX ALFA SUPER

ForageMax

- High in protein
- For hay and haylage
- Excels in dry and hot climates

CutMax Alfa Super - Very high yields under dry conditions

DLF Alfalfa with grasses for dry and warm regions

CutMax Alfa Super is a long-term conservation mixture with a high proportion of DLF Alfalfa. This ensures a high production of protein per hectare.

DLF Alfalfa has a very deep developing root system and the grasses in this mixture are species with a great tolerance to hot and dry conditions: consequently CutMax - Alfa Super is a very persistent mixture for dry and warm regions in a 3 cut system for silage or hay.

The mixture is high in protein and recommended for hay and haysilage production under dry conditions. High palatable cocksfoot prevents losses of protein during drought and provides better structure and ensiling process.

Seeding rate, KG/HA: 20-25
